DETAILED ACTION

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, "selected objects" (line 7) has no antecedent basis since Applicant has not defined any means of selection an object; furthermore, "total points" (line 6) is unclear as to its proper antecedent basis as whether it indicates "points" in line 5; "adding" (line 5) is unclear as what it means (it should be amended to, e.g., placing or assigning); "adding or not adding" (line 7) is unclear as which action is performed (it should be amended to include the condition such as comparing said ratio to a predetermined constant.)

In claim 6, it is unclear as how the two steps of determining (lines 3-4) are related to the step of associating (line 5); or the step of associating is decided based on the two steps of determining.

In claim 11, "an ink editor" (line 2) is unclear as to its proper antecedent basis as whether it indicates "an ink editor" (line 1); "an ink canvas" (line 2) is unclear as to its proper antecedent basis as whether it indicates "an ink canvas" (line 1); "the attached

editing mode" (line 4) has no antecedent basis since Applicant has not defined any means of attaching an "editing mode"; the step of determining (line 3) is unclear as how it is performed or whether it is related to the step of attaching (line 2).

The remaining claims are rejected because they are dependent upon the rejected claims.

The abstract of the disclosure is objected to because "they" (line 4) is unclear as what it means. Correction is required. See MPEP § 608.01(b).

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to "determining overlap between a selection region and an object, classified in class 345, subclass 629.
- II. Claims 6-10, drawn to modifying the behavior of an ink editor related to a stylus or pen, classified in class 345, subclass 179.

Art Unit: 2628

III. Claims 11-16, drawn to control user's ink based input, classified in class 358, subclass 1.9.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as Determining the overlap regions. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together.

Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.
